

*iPitch* @ Asia Clean Energy Forum 2021  
Monday, 14 June 2021 | 8:00pm to 9:30pm**SEE Tech Solutions**

Provides tech-enabled solutions that improve energy efficiency of facilities. Their data monitoring and tracking solutions include tracking and monitoring for industries such as hospitality, health care, commercial buildings, IT data centers, SME factories, warehousing, pharmaceuticals, steel, telecom, power plants and other commercial applications.

**RESYNC****Resync Technologies**

Provide an intelligent energy management platform for smart cities and systems with multiple energy sources. Their platform uses a combination of machine learning models and deep technical knowledge of energy systems to ensure system efficiency, optimised performance and continuous savings. Resync's full, end-to-end solutions provide consolidated monitoring, real-time performance analytics, efficient asset optimisation, predictive maintenance, performance forecasting, alarm management, customised reporting, smart facility management and more.

**Abivin**

Provides the most optimal supply chain optimization solutions for companies across a range of business sectors. Their solutions are used by manufacturers, distributors, retailers, transporters, logistics service providers, and container freight operators. Abivin vRoute is an AI-power logistics management platform with a proprietary route optimization algorithm.

**Qi Square**

Provides cutting-edge digital tools that can accelerate the adoption of sustainable solutions for performance improvement. Qi Square's technology is based on high-performance digital twinning, engaging with building operators via a digital platform, and promoting improved energy efficiency and carbon management. Their solutions provide first-hand visibility in green projects through quantification and qualification of energy, carbon, and cost savings. Their platform allows aggregation of city-scale data and insights for buyers and dealmakers, and avoids travel and reduce physical touchpoints by providing secure remote digital access.

**SunMoksha**

Develops and deploys clean and sustainable technology solutions for rural development and urban sustainability. For rural development, Sunmoksha implements projects for socio-economic development of the communities and farmers. For urban sustainability, they deploy solutions for management of energy, water, and environment. Some of Sunmoksha's applications include smart irrigation, smart water management, integrated smart nano-grids, energy management, and micro-economic zones (MEZs).

**Genesis Ray Energy**

Provides web-based analytical products that simplify the complex and often subjective decisions for stakeholders in the clean energy industry. The company provides bespoke analytics and GIS-based data approaches to address the various technical, strategic and commercial challenges faced by operators in gas, LNG, power, and renewables industries.
